PRESS RELEASE

**OUTSCALE, BACKED BY INTEL, LAUNCHES ITS OFFENSIVE TO
DELIVER A HIGH-PERFORMANCE, TRANSPARENT CLOUD THAT'S
100% INTEL "ICT" CERTIFIED**

- **Maximum security and availability for software vendors, start-ups and enterprises worldwide**
- **100% of Outscale's Cloud Services worldwide use Intel®'s Xeon® family of processors**

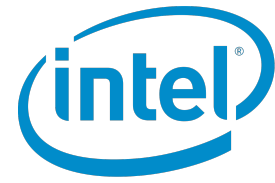

(Paris, France) – 2015, November 5th - Outscale, an IaaS Enterprise-Class Cloud service provider and a Strategic Partner of Dassault Systèmes, today announced that it has been awarded Intel® Cloud Technology certification.

Intel's ICT programme is designed to guarantee that at least one of the services provided by a Cloud supplier to an enterprise is based on infrastructure powered by processors from Intel's Xeon® family. In the wake of the most recent report from French company association CIGREF (2015), and in response to demands on the part of IT decision-makers for greater transparency in Cloud services, Outscale is thus blazing the trail towards a more responsible Cloud. Outscale's clients – some of the most exacting in the industry – thereby benefit from guaranteed maximum performance and a high degree of scalability, anytime, anywhere in the world.

Outscale: a certified 100% INTEL player in the Cloud market

Faced with a lack of transparency on the part of some Cloud providers, the latest CIGREF report highlights the expectations of decision-makers when it comes to the quality of Cloud-based services. Outscale's commitment specifies that enterprises using a Cloud provider must have maximum visibility as to the services provided. For this leader in Enterprise-Class Cloud services, having the most sophisticated certifications on the market is the best way of guaranteeing that clients benefit from performance, security and availability.

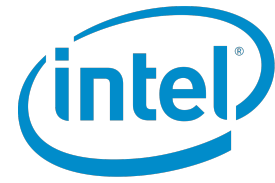

Outscale has been awarded Intel ICT certification for all of its services and commitments. [According to the Intellitrends Survey 2013*](#), a non-uniform Cloud infrastructure may result in performance variations of as much as 40-60%. Intel's certification of the whole of Outscale's worldwide Cloud thus inspires vital confidence on the part of software vendors, start-ups and enterprises, helping them as they deploy and orchestrate reliable, unified Cloud infrastructures – worldwide. What is more, Intel's "ICT" certification follows just a few weeks after [certification by Cisco](#), placing Outscale among the leading global Enterprise-Class Cloud providers.

About Outscale

Founded in 2010, strategic partner to Dassault Systèmes and CMSP Advanced certified by Cisco Systems, Outscale provides enterprise-class Cloud Computing services (IaaS) that meet regulatory and local requirements internally and to clients seeking to boost Business Agility and rapidly deploy value-enhancing business models. Investing 15% of revenues in R&D, from its very beginnings Outscale decided to offer services combining excellence and thoroughness, which have won over more than 800 corporate clients in France, USA and China, as well as several hundred users working for well-known multinationals via Dassault Systèmes. Outscale has received ISO security certification 27001-2013 for all its French locations.

Intel ICT certification: a guarantee of quality and high standards in Cloud services

ICT certification is crucial for enterprises seeking reassurance as to the quality delivered by their Cloud provider. Intel guarantees quality of service based on high-performance platforms powered by processors from the Intel® Xeon® family.

"We're proud of the fact that Intel has recognized the Excellence of our Cloud services worldwide. Given our clients' high standards, we've opted for an Enterprise-Class Cloud ever since the beginnings of Outscale. This underpins our deeply-held commitment to provide our clients with security, performance and scalability, enabling them to develop, certify and deploy their applications on the Cloud. The technical support of our partner Intel is highly strategic when it comes to delivering a groundbreaking Cloud platform," said Outscale's CEO Laurent Seror.
